Performance Report

This report summarizes how LearnSphere is performing across students, courses, marketing, and instructors, and what the data suggests we should do next.

Prepared by: Tendai Teremuka

Data source: LearnSphere student, course, enrollment & instructor records

Executive Summary

LearnSphere had a strong year of growth: student numbers, enrollments, and revenue are all up double digits, while course completion held roughly steady. The dashboard below highlights where that growth is coming from and where it's being left on the table.

600 Total Students +19.0% vs last year	4,000 Total Enrollments +18.7% vs last year	R3.11M Total Revenue +18.3% vs last year
38.0% Completion Rate flat vs last year	3.38 / 5 Avg Student Rating −0.2% vs last year	R5.27K Avg Revenue / Paying Student 98.5% of students have paid

Growth & Revenue

Signups have held steady over the past two full years (217 in 2024, 187 in 2025), with each signup year converting into several times as many course enrollments – 2026 figures are still growing since the year isn't complete yet. Mobile Development is by far the leading revenue category (R436.6K), well ahead of Data Science (R256.7K) and Digital Marketing (R76.2K). D – dn

Overview dashboard – students, enrollments, revenue, and status breakdown

Of all enrollments to date, 43.0% are Completed, 28.3% Dropped, 14.6% still In Progress, and 14.0% Cancelled. The dropout share is the single biggest opportunity: closing even part of that gap converts directly into revenue already paid for, since most dropped students paid before disengaging. This matters most in Mobile Development specifically – it's both the top revenue category and has the 2nd-highest dropout rate of any category (13.56%).

Course Performance

17 Active Courses	R281.48K Top Revenue Course AWS Cloud Practitioner	12.91% Highest Dropout Course Google Ads Certification
-----------------------------	---	---

Average course completion sits at 37.97%, essentially flat quarter-on-quarter. The average course price is R1.31K, ranging up to R3,000. UI/UX Design and Mobile Development have the largest enrollment volumes of any category (583 and 559 enrollments respectively). Two courses stand out as needing attention, completing well below the rest: Content Writing Skills (26.45%) and Google Ads Certification (25.44%).

Course Performance dashboard – active courses, completion, price, and category mix

Students & Marketing

Google Search Top Signup Source 20.7% of all signups	Desktop Top Device 40.7% of all devices	36 yrs Avg Student Age range 16–55
--	---	--

Google Search and Facebook Ads are the two leading acquisition channels by volume, well ahead of TikTok, Walk-In, WhatsApp, Organic, Referral, and Instagram. Desktop remains the dominant device (45.9% of usage), with mobile phone and tablet together making up a meaningful minority worth monitoring as usage patterns shift. Looking specifically at students who both paid and completed their course, Desktop + Google Search is confirmed as the single strongest combination (63 students) – meaning this channel converts as well as it acquires.

Students & Marketing dashboard – acquisition channels, devices, and geographic reach

Instructors

25 Total Instructors 4.4 yrs avg. experience	Logan Nguyen Top Rated Instructor 5.0 / 5 rating	Monica Morton Top Revenue Instructor R560,718 total revenue
--	--	---

Monica Morton leads the full instructor revenue ranking, followed closely by Connie Adams and Phyllis Rodriguez:

Instructor	Revenue	Rating
Monica Morton	R442,169.67	4.8
Connie Adams	R423,386.64	2.8
Phyllis Rodriguez	R279,045.90	0.0*
Rhonda Mullins	R255,288.03	2.7
Kirsten Bowen	R229,359.02	4.2

*Phyllis Rodriguez's 0.0 rating looks like a missing data point rather than a genuine score, given her 3rd-place revenue – worth a quick data check.

Geographically, Johannesburg (R626.2K), Cape Town (R559.3K), and Durban (R511.4K) are the three clear leaders on both enrollments and revenue, well ahead of Bloemfontein and East London. Marketing spends aimed at growing these three metros further is likely to have the most impact.

What the Data Is Telling Us

A high rating doesn't guarantee students finish the course

We compared average student ratings against completion rates across every course and instructor and found no consistent link between the two. A well-reviewed course can still have a high dropout rate. This means that rating and completion should be tracked and managed as two separate goals, not assumed to move together.

Discounts aren't the answer to low completion

Students who received a discount completed courses at almost the same rate as those who paid full price – only 1.16 percentage points apart. If the goal is to raise completion, price cuts are unlikely to move the needle; the cause is more likely to be course design, pacing, or student support.

Revenue is concentrated in a few instructors and categories

Mobile Development alone brings in R436.6K – more than the next two categories combined – and Monica Morton's R442.2K in revenue is roughly double the 10th-ranked instructor's total. That's a strength to protect, but also a concentration risk: Mobile Development is also the category with the 2nd-highest dropout rate (13.56%), so the biggest revenue driver is also where the most is currently being lost.

Recommendations

- Prioritize retention work in Mobile Development first: it's the top revenue category and the 2nd-highest dropout category (13.56%), so improvements there have the largest financial payoff.
- Investigate the two lowest-completing courses – Content Writing Skills (26.45%) and Google Ads Certification (25.44%) – for content, pacing, or support issues rather than assuming price is the barrier.
- Double down on Google Search and Desktop-optimized marketing: it's confirmed as the top channel for paying, completing students (63 students), not just the top channel for raw signups.
- Study what top instructors like Monica Morton (R442.2K revenue, 4.8 rating) do differently and see whether those practices can be shared with instructors on lower-completion courses.
- Reassess the discounting strategy: since discounts don't meaningfully lift completion, consider redirecting that margin into student support (e.g. check-ins, reminders) that more directly targets the dropout problem.
- Focus on an incremental marketing budget on Johannesburg, Cape Town, and Durban – the three metros already driving the large majority of enrollments and revenue.
- Follow up on Phyllis Rodriguez's 0.0 instructor rating – likely a missing data point given her strong 3rd-place revenue – to make sure the instructor data feeding this dashboard is complete.

Next Steps

The Power BI dashboard is refreshable and interactive – filter by year, province, category, or device to explore any of the findings above in more detail. We recommend a quarterly review of this report to track whether completion and dropout trends are responding to the actions above.
